Animal Management — CRUD Lookup Table

Branch: `main`

Commit: `8c351f0077d49d4523567ec7867c6953bba5bdfb`

User operation in Animal screen	Controller action	Model	Repository call	C	R	U	D
Add animal	`AnimalController.addAnimal()`	`Animal`	`save(animal)`	✓			
Display all animals	`refreshTable()`	`Animal`	`findAll()`		✓		
Load/search selected animal by ID	`loadSelectedAnimal()` / update/delete validation	`Animal`	`findById(id)`		✓		
Edit animal	`updateAnimal()`	`Animal`	`save(updatedAnimal)`			✓	
Change adoption availability	`updateAnimal()`	`Animal`	`save(updatedAnimal)`			✓	
Delete animal	`deleteAnimal()`	`Animal`	`delete(id)`				✓

Source-specific note: The current `Animal` model has `id`, `name`, `species`, `ageYears`, `ageMonths`, `healthStatus`, `availableForAdoption`, and `description`. Species and health status are selected from combo boxes, but the model stores them as strings. `LookupTable<T>` is a generic repository implementation, not a dedicated editable lookup-data screen.
